

Project Productivity Workshop

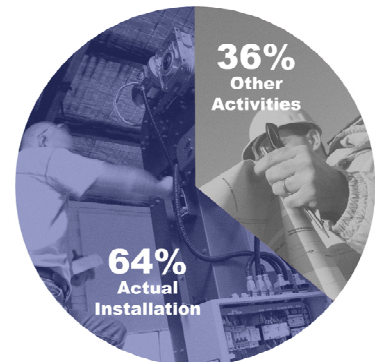

Critical Thought Processes

Sponsoring Industry
Association Logo

The construction process is very inefficient with **36%** of craft labor hours spent on **NON-INSTALLATION ACTIVITIES!**

This presents a **HUGE OPPORTUNITY** for contractors that take the time to become more proactive in their project management processes.

Whether you do large projects or small your project team including PM's, Estimators, Superintendents and Foremen will benefit from these classes.

Project Pre-Planning	Establish the cost of finding errors early versus finding them during or after construction. Go over the key areas of pre-planning a project including buyout, safety, work plan and installation details.
Impacted Productivity	What is productivity? What impacts productivity? How much does it really cost and what can be done? Learn the effects of multiple change orders, design conflicts and out-of-sequence work including proper documentation of impacts.
Staying On-Track	Managing the 4 pillars of productivity effectively - using 3 week schedules and daily action item lists to keep the project on track.
Production Tracking	Learn what job costs don't tell you and why production tracking is a valuable motivational tool. Brief introduction to production tracking methodologies.

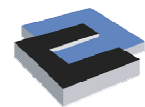

One day workshop starts at 8:00 AM and will end at approximately 5 PM with a 1 hour lunch break

Members: \$300 Per Person
Non-Members: \$350 Per Person

*Pricing Typical But May Vary Depending On Projected Interest

Date of Class: Register today – class size is limited and will sell-out quickly

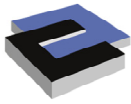

WORKSHOP BY

D. BROWN
MANAGEMENT

Best results attained if entire project team including foreman, superintendent, project manager and estimator go through workshop and group exercises together

EXAMPLE ONLY

▶ The Modules

The construction industry is facing a huge shortage of trained personnel over the next decade.

This shortage affects not only the crafts people but the entire project team including project managers, superintendents and foremen.

The management class series is specifically designed for all project team members of a subcontracting firm. Topics include:

- Construction Documentation
- Schedule Management
- Tracking Jobsite Productivity
- Pre-Planning For Profits
- Impacted Jobsite Productivity
- Customer Service
- Talent - "People Processes"
- Change Orders
- Profit Dynamics & Projects
- Cash Flow & The Project Team
- Priorities – Time Management

Training Delivery & Customization

Each module fits into a 2-3 hour timeframe and is designed to present several new ideas including group brainstorming exercises that can be put into use immediately. Ideally the training is spaced out 1-2 weeks apart so that change can happen within the company and discussed during the beginning of the next module. Modules can be delivered in-person or via the internet / conference call technologies for remote teams. All modules can be customized for specific companies to facilitate better buy-in from the project team.

▶ Feedback From Past Training

"Brainstorming is vital to any beginning. I believe through the group exercises I can learn to develop ideas I typically may have not thought of."

"Content was good, it gives you a better view of the big picture."

"It was good to hear how larger companies function in areas that smaller companies struggle."

- Michael Robinson, Project Manager Bosley Electric

"I enjoyed the stories and anecdotes in your presentation. I find it easier to pay attention if I am presented with things that spark my imagination."

- Jacob Moss, CEO Moss Electric, Inc.

"Great group exercise – the [cost] variations were amazing."

- Regarding The Project Pre-Planning Module

"It was a good refresher and helps with fine tuning of my management skills."

- David Weeks, Project Manager Berg Electric

"I found the class informative – WOW! I had no idea there was so much going on outside the jobsite."

- Brian Peters, Foreman Vasko Electric
