

▶ How We Can Help

Pre-planning projects produces significant results. The majority of the results come from the project team having their heads thoroughly into the project and having talked through every last detail.

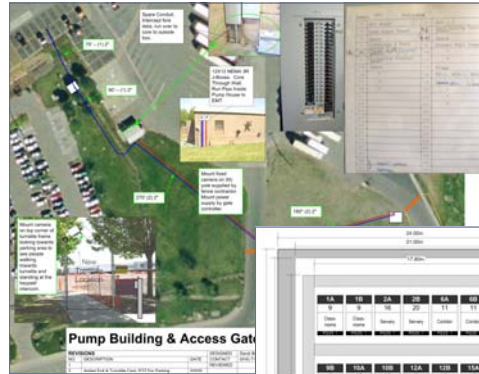

Because of this we offer support and facilitation services only. A 3rd party cannot pre-plan a project for you.

Training: There are a variety of tools and methods that can be used for pre-planning. We offer a series of training classes including an overview of the process and how to use the specific tools.

Facilitation: As a follow-up to the training we will facilitate project start-up and planning meetings making sure that all parties remain focused and the process moves forward efficiently.

Coaching: As a follow-up to the training and facilitation we can provide one-on-one coaching to various team members. This coaching helps work out minor details, reinforce training and further drive the planning process into the culture of the company.

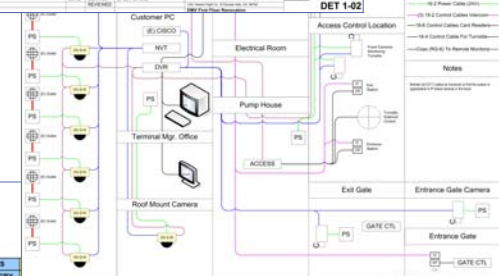

▶ Planning For Success

- Improve field production
- Improve quality
- Better customer impressions
- Communicate ideas better
- Installing, not fighting fires
